Bekaert Specialty Films: solar control, safety and industrial applications

Bekaert Specialty Films, LLC (BSF) is the premier provider of industry-leading window film brands such as Solar Gard®, Panorama®, and Solar Gard Armorcoat®. Today it brings the benefits of window film to home and automobile owners, businesses, and large commercial buildings, worldwide.

With more than 25 years experience in the research, development, and manufacturing of vacuum sputter coatings onto flexible polymeric films, BSF is also a leading supplier of vacuum sputtered silver or aluminum reflective films for a wide variety of display and industrial applications.

Bekaert Products

Bekaert Specialty Films, LLC is a global leader in the development, manufacture and distribution of solar control, safety and security window films and industrial products.

Whether you are a homeowner, run a small business or control a billion-dollar corporation, you do what it takes to reduce expenses and protect your bottom line. With Bekaert® window film installed on your home or building, you can save significantly on energy costs, maintain a more comfortable and productive environment, reduce interior fading and improve exterior appearance. Once it is installed, the benefits keep coming year after year with durable, long-lasting Bekaert® window films.

Bekaert manufactures:

- Solar protection films for homes, businesses, and automobiles
- Safety films for homes or businesses for protection against natural disasters such as hurricanes, or earthquakes, terrorists, bomb blasts, intruders, and even accidents
- Industrial films for medical, paint protection, and security applications

About Window Film

Bekaert window film is ideal for any property or automobile where maintaining sunlight while reducing heat is important. Bekaert window films are thin, multi-layered pieces of optically clear film that are retrofitted to the inside surface of glass to help you save significantly on energy costs, maintain a more comfortable and productive environment, reduce interior fading and improve exterior appearance. Bekaert films are sputter-coated with durable, exotic metals such as titanium, stainless steel, copper, gold, silver, inconel, chromium, aluminum and other alloys. These varying combinations of metals are what give the window film its exceptional solar performance capabilities and color.
