Product Descriptions

Hüper Optik is an innovator in energy efficiency solutions, and fuel conservation for the global marketplace. Hüper Optik's patented nanoceramic technologies offer durability, and chemical stability in saltwater, coastal and elevated environments, which makes them ideal for energy conservation in vacation properties. Hüper products do not change the aesthetic value of glass, and provide up to 98% infrared rejection, and 99% ultraviolet rejection. The Hüper Security Film lines increase the shatter resistance of glass.

Specific Product Applications

Hüper Optik products are made for marine, commercial, and residential applications. Having completed numerous commercial projects, such as the prestigious Du Sable Museum in Chicago, the Smithsonian Institution in Washington, D.C. and Princeton University, New Jersey. Our project at the Maui Marriott enabled the organization to reduce its energy consumption considerably. Hüper Optik uses patented German nanotechnologies in multi-layered ceramics that are able to achieve desired energy saving performance. Hüper Optik's dual layer ceramic products are a perfect fit for saltwater environments because of their enhanced ceramic durability, and their propensity to withstand corrosion. Some of the tertiary benefits of Hüper Optik include increased comfort, reduced fading, reduced glare, and enhanced views.

Our Brand Family Includes:

Select Series Solar Control Films – Architectural and Automotive

Security Series Safety/Security Films – Architectural

Ceramic Series Spectrally Selective Films – Architectural and Automotive

Hüper Fusion Traditional Series Films – Architectural

Fusion X-treme Series – Automotive

Hüper Optik USA is North America's leader in multi-layer ceramics and reflective solar control film technology, providing solar energy control and security solutions for residential, and commercial customers in architectural, automotive and marine industries through a strategic network of authorized dealers in the United States, Mexico, South America and Canada.
